

Common Ports Reference

Well-known TCP/UDP ports every analyst should recognize

Port	Protocol	Service
20/21	TCP	FTP (data/control)
22	TCP	SSH
23	TCP	Telnet (insecure, avoid)
25	TCP	SMTP
53	TCP/UDP	DNS
67/68	UDP	DHCP
69	UDP	TFTP
80	TCP	HTTP
110	TCP	POP3
123	UDP	NTP
143	TCP	IMAP
161/162	UDP	SNMP
179	TCP	BGP
389	TCP	LDAP
443	TCP	HTTPS
445	TCP	SMB
465	TCP	SMTPS
514	UDP	Syslog
587	TCP	SMTP (submission)
636	TCP	LDAPS
993	TCP	IMAPS
995	TCP	POP3S
1433	TCP	Microsoft SQL Server
1521	TCP	Oracle DB
2049	TCP/UDP	NFS

3306	TCP	MySQL / MariaDB
3389	TCP	RDP
5432	TCP	PostgreSQL
5900	TCP	VNC
6379	TCP	Redis
8080	TCP	HTTP alternate / proxy
8443	TCP	HTTPS alternate
27017	TCP	MongoDB

Reading this table

A port being 'well-known' (below 1024) doesn't mean it's always safe or always in use — it's a convention services follow, not an enforced rule. Treat any unexpected listener on these ports as worth investigating, and any of these open to the public internet without a clear reason as worth reviewing.
